INTRODUCING

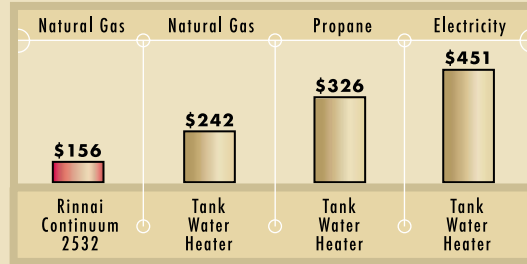

Hot water is one of those things we simply take for granted—until it isn't there. But the fact is, your choice of a hot water heater makes a huge impact on your quality of life. That's why you should compare the Continuum Endless Hot Water Heating System by Rinnai to a standard 40-gallon water heater tank.

Continuum vs. 40-gallon tank

| | Continuum | 40-Gallon Tank |
|---------------------------------|----------------|----------------|
| Hot Water Capacity | Endless Supply | 40 gallons |
| Digital Temperature Control | Yes | No |
| Consistent Temperature | Yes | No |
| Digital Self-Diagnostic Control | Yes | No |
| Warranty | 10 Years | 6 Years |
| Floor Space Required | 0-sq. feet | 16-sq. feet |
| Life Expectancy | 20 years | 10 years |
| Indoor or Exterior Installation | Yes | No |

Energy savings (2001 cost)

Finally.

Hot water that never
stops running.

Here's how it works.

When you open the tap, the Continuum senses the flow and starts the heating process. The water flows through a heat exchanger and is heated to whatever temperature you've selected. The Continuum uses feedback from a water flow sensor to adjust the burner, giving you a consistent water temperature for as long as you need it--an important feature if you have small children. When the tap is closed the Continuum simply shuts off until you need it again, providing you with significant energy cost savings.

gives you an endless supply of hot water. Now you can run the dishwasher, do a load of clothes, and take a shower all at the same time, even during the busy holiday seasons.

And running.

More Efficient

You don't use hot water 24 hours a day, but you're paying to heat water around the clock. That's because old technology hot water tanks just heat and reheat the same water. The Continuum Endless Hot Water Heating System by Rinnai is more efficient. It quickly heats your water and delivers a never-ending supply of hot water for as long as you need it.

The Continuum delivers up to 8.5 gallons of hot water per minute. Which allows you to use multiple hot water sources at once

kitchen

laundry

shower

And running.

You can do it all.

Have you ever run out of hot water during a shower? Have you had to play hot water traffic cop, and manage when to run the washer and whether to wait to do the dishes until after baths and showers? The Continuum

And running.

Perfect for today's homes.

Today's plush amenities like multi-head showers and garden tubs make for a great lifestyle. But where will all the hot water come from? With a shower head flow rate of about 2.5 gallons a minute and over 70 gallons of hot water required to fill today's luxurious garden tubs, the old technology hot water tanks simply can't do the job. With a Continuum by Rinnai, you get up to 8.5 gallons of hot water per minute for as long as you need it - giving you enough to do everything you'd ever want to do.
